

IMPORTANT NOTICE

The adhesive (Loctite 410) and accelerator (Loctite 7452) that is used to attach the transducers is no longer included in STS shipments due to increased airline shipping restrictions. Local Loctite distributors may be located around the world through the Loctite website: www.loctite.com

Use the following information for ordering both items:

Adhesive: Loctite 410 Black Toughened Adhesive, Part # 41045 in 0.7oz container

Accelerator: Loctite Tak Pak 7452, Part # 18637 in 0.7oz aerosol spray container

It's possible that some distributors may not have the exact packaging described above. For example, sometimes the accelerator is available only in pump spray rather than aerosol, and this is acceptable.

Note: The accelerator (Loctite 7452) is considered a "Dangerous Good" and must be shipped appropriately.
